pressed florals, silk ribbon, heirloom paper

A premium guest-memory layer for your studio workflow

Offer couples the guest POV without inheriting a messy file chase. WeddingSnaps.ai collects guest, vendor, family, and photographer handoff media into a private, source-labeled hub with AI-assisted captions, searchable review, best-shot guidance, and approval gates before anything is shared.

AI-assisted curation. Guided review. Studio-safe handoff.

AI-assisted curation

Captioned searchable uploads

Guided review queues

Best-shot selection

Gallery stack friendly

Package guest candids as a service, not a folder.

Couples are already going to ask guests for photos. WeddingSnaps.ai gives studios a way to package that guest-memory layer as organized, private, searchable, and review-assisted.

1

Private intake

Guest POV, vendor files, family links, and post-event photographer upload.

2

AI-assisted structure

Captions, tags, source labels, scene and ritual context.

3

Guided review

Duplicate clusters, best-shot selection, batch filters, and approval lanes.

4

Controlled handoff

Approved guest POV, vendor galleries, archive packages, and gallery-stack exports.

Your final gallery remains the hero. WeddingSnaps.ai organizes the memory layer around it.

Help clients find the feeling without exposing the raw pile.

The photographer pitch is not raw collection. It is a premium curation layer that helps people find moments by idea while protecting your professional gallery.

Searchable moments

Try joyous moments, all sangeet energy, quiet vows, or parents laughing.

Caption layer

Generated captions and tags turn guest uploads into a searchable story.

Best-shot guidance

Duplicates, picks, wall-safe filters, and archive candidates reduce manual sorting.

Source separation

Guest, vendor, pro, planner, and family uploads stay labeled and distinct.

Approval gates

Gallery, wall, vendor, archive, and download destinations are independently approved.

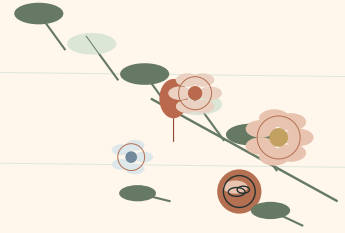

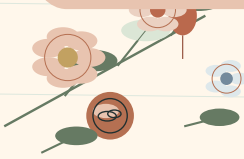

Fewer follow-ups

Late uploads, vendor requests, guestbook notes, and archive exports live in one hub.

private semantic search

guided review

captioned archive

Own the memory layer before someone else does.

WeddingSnaps.ai gives studios a practical way to offer AI-assisted memory curation while protecting the gallery, the brand, and the client workflow couples already hired you for.

AI CAPTION

Friends laughing under warm sangeet lights, hands raised mid-song.

joy

quiet blessings

dance floor energy

Position

A premium add-on for couples who want the full story without the mess.

Protect

Guest candids are useful, searchable, and separate from your professional edits.

Deliver

Approved packages, vendor galleries, captions, and archives reduce follow-up.

Scan for the studio guide

Open the photographer offer builder and see the client-facing memory layer.
